OVERVIEW

The nLight nIO PC KIT provides an outdoor photocontrol solution for nLight networks. In addition to a weatherproof outdoor photocontrol that mounts to any 1/2" knockout, the nIO PC KIT includes an interface device with a normally low input. This device called a nIO NLI, detects the state of the photocontrol and communicates it over the nLight network to a relay(s) controlling a lighting load. The nIO NLI can also trigger local or remote control scenes to run when the photocontrol's state changes.

The nIO NLI is daisy-chain wired into any zone of nLight devices (sensors, power packs, WallPods) using CAT-5e cabling. Power to the nIO NLI device is provided by the CAT-5e connection to an nLight power pack/supply within its zone, or a Bridge. Power to the outdoor photocontrol is provided via Class 2 wires from the included PS 150 power supply or other low voltage source (for example the auxiliary power output on an nPANEL 4).

The nIO NLI can trigger one of several modes when the connected outdoor photocontrol changes states:

- WallPod Mode: Turns relays on/off within its zone
- Local Scene Mode: Initiates a scene to run on its local zone
- Remote Scene Mode: Requests the Gateway to run a system profile on non-local devices or zones
